TITLE	Bibliography of Science Courses of Study and Textbooks for Grades K-12, 1973 Edition.
INSTITUTION	National Science Teachers Association, Washington, D.C.
PUB DATE	73
NOTE	106p.
AVAILABLE FROM	National Science Teachers Association, 1201 Sixteenth Street, N.W., Washington, D.C. 20036 (Stock No. 471-14658 $2.50)
EDRS PRICE	MF-$0.65 HC Not Available from EDRS.
DESCRIPTORS	*Bibliographies; *Courses; *Elementary School Science; Environmental Education; *Instructional Materials; Kindergarten; Science Education; *Secondary School Science; Textbooks

ABSTRACT

As a continuation of the series published by the National Science Teachers Association, two respective bibliographies of courses of study and of science textbooks are presented in this volume together with a list of publications of curriculum projects. State departments of education, school systems, directors of environmental education projects, publishers, and science curriculum projects are contributors to the information collection. The courses of study include materials prepared by school districts or systems and by funded projects. The book lists include textbooks, laboratory manuals, teacher references, books of experiments, and curriculum project materials. Information is limited to publications between 1968 and July, 1973, at the kindergarten and elementary and secondary school levels. The entries contain state name, title, grade, data, price, and contact address in the courses of study list; and publisher, title, date, price, and grade in the science textbook and project publications lists. Addresses of textbook publishers are given in the appendix. (CC)

FOREWORD

This bibliography continues the series of bibliographies of courses of study and textbooks in science begun in 1959 by the National Science Teachers Association. In the present edition all the grades are presented in the single text.

The courses of study listed are those that were reported as being available for circulation beyond the school district or system in which they were prepared. Information was requested from all state departments of education, from school systems listed in the previous edition of the bibliography, and from directors of environmental education projects. Materials from funded projects now commercially published are listed under textbooks.

For the book entries, inquiries (and follow-up reminders if necessary) were sent to all publishers represented in the last edition of the bibliography and to all who are listed in EL-HI Textbooks in Print 1973 as having science textbooks or programmed instructional materials. Inquiries were also sent to all science curriculum projects listed in the International Clearinghouse Report 1972, published by the Science Teaching Center at the University of Maryland and the American Association for the Advancement of Science.

The books listed have been limited to textbooks, laboratory manuals, teacher reference material, books of experiments, and the publications of curriculum projects. Enrichment reading was not requested, though the difficulty of drawing a sharp line between a textbook and supplementary materials is becoming increasingly acute.

For all of the entries -- both courses of study and textbooks -- the request specified material published after 1968. The information was current as of July 1973. We have tried to include every item where applicable. We regret if there are any which have not come to our attention.

The abbreviations JH and SH indicate Junior High School and Senior High School, respectively. The notation -- signifies that the information was not available or could not be so restricted.

For further information about any of the entries, write directly to the address of the publisher, school, or other source given. (Addresses of textbook publishers are given in the Appendix.) Many courses of study and textbooks are on display at the national convention of the National Science Teachers Association, and many publishers have booths at the NSTA area meetings so that teachers may inspect and discuss their latest offerings. The book review pages in The Science Teacher, Science and Children, and The Journal of College Science Teaching and the reviews in Science Books -- a Quarterly Review, published by the American Association for the Advancement of Science, also offer current information on new publications in science.
